Excelsior's Dynamic Editor is a small program (under 400 lines of code) which allows you to quickly edit Excel worksheets. You can view the worksheet before editing and change the values. If you want to know what the edited values would look like, you can convert them to a spreadsheet that already has cells filled out with those values. You can edit the worksheet you are viewing in any format you wish (decimal, hexadecimal, binary, octal). Simply select the Edit - Window, Change to the desired format and make your edits. Keymacro Description: This program is simply a graphical program that allows you to edit keys - either for Excelsior or other applications. There are 6 panels on the interface which allow you to view, enter, change values, convert, and export keys. When you change values, the program uses the hexadecimal codes for the changed values to generate a pair of hexadecimal values, that when converted to decimal, will have the same value as the hexadecimal representation of the original. To do this, a pair of hexadecimal numbers is generated for each change. You can either change all changed values to the new hex values, or to change the hex values to decimal, which will then generate a decimal pair with the new values. You can also export the changed values to a separate.kml file, if desired. To use the program, simply select the Change to Hexadecimal - Window, and change the values as desired. When finished, press ESC or right click on the key to change to the default key. All changes will be saved in the current key you are editing. Please note that the key may have more than one decimal value (for example, the decimal key may have a decimal value of 0x9c6 and another 0 2edc1e01e8

What's New In Numb3rs?

The goal of this program was to allow users to convert numbers without having to memorize decimal, octal and binary notations. The source code is intended to be simple. Original idea The original idea was to implement the IBM 7020[1] using the C language. I designed the user interface to allow the user to input numbers in all of the above mentioned formats, but in addition, the user could type in a command from the list to generate a specific format.
