Back to Pixelmator, I prefer to use a simpler Photoshop workflow when starting from scratch. I love the new, more intuitive undo in Photoshop and appreciate its streamlined interface. But I also appreciate and miss many of the attributes you can obtain from customizing your Photoshop workflow. The many of the matrix-mode features have been incorporated into Lightroom as well (as have many of the UI snazzy swatches). In fact, Elements 3 features the 'Live Guides', which gives a live preview of the selected area. All of the other new features in Lightroom are designed to make organizing images faster and easier for anyone, whether you edit a lot of images or just edit a few a week. A few more new features in Lightroom 5 allow you to use the recently used images and data in easier ways. First, the "Recently Used" panel is much larger than the previous one, making it possible to see more images in there. It's also very easy to find your most recent image with recently used images, thanks to a new panel that lets you see at a glance your images that have been edited most recently, as well as how long that image has been edited. When it comes to editing images, Lightroom doesn't follow the time-based photo editing standards of a decade or two ago. As an example, images can be edited with anything from minute to hour or even day long time limits. If you're working on an image with a time limit, then you can crop that image (or use the grid views) directly within Lightroom, as well as pick the number of images that will be included in the adjustment. In image editing, you might want to view an image on its own to make sure that the image looks right, without the final adjustment in mind. Lightroom makes that process easier, whether you do the immediate adjustment or not, with the addition of the 'Side by Side' option.

But what if you had access to Photoshop anywhere, on any device? Photoshop Camera for iOS and Android opens up the possibility to bring the power of Photoshop to every corner of the mobile photography world. From the vantage point of a smartphone, just press the camera button and you can achieve abstract, artistic shots with the full creative potential of Photoshop. With Photoshop Camera, iPhone photo-sharing and social networks have never been so powerful. With AI, camera lens tools, and advanced, compositing-focused algorithms cocreated by Adobe and On2, Photoshop Camera can upend the way photographers shoot and edit image. For instance, when shooting in HDR mode, the camera app is able to identify and diffuse areas of the image affected by overexposure simultaneously eliminating the hard edges you would normally see. When you share your mobile photo on social media like Facebook or Instagram, the app's automatic lens blur uses AI to remove the distracting look of a poorly focused image. Photoshop Camera also provides the opportunity to explore a variety of creative tools—from detailed cropping to portrait retouching. Simply choose your action and apply. By eliminating traditional boundaries between analog and digital, you can now have access to Photoshop wherever inspiration strikes. e3d0a04c9c
