Lightroom displays a wonderful array of editing tools, all designed to simplify your workflow. For example, adjustment curves now appear on the right side of the screen and offer much better control. This is especially noteworthy for the color palette. There is one limitation, though. Once you use it, you won't be able to create a new one. Unfortunately the LUT manager is currently a bit too simple to provide all the controls you might want. You can also bring up the panel and drag any of the tools directly to create a new filter, which is nice. You can easily turn repetitive tasks into one click and save time. The negatives are probably the missing manual exposure and Contrast. The broken link to the CS6 page can now be fixed. The link is now hidden behind the download link for the online update. This seems like a very non-intuitive design. It would be better to hide the link so users can't inadvertently download the update. The recent release of the Adobe Photoshop CS6 has a lot of potential. The first feature of the program is the new feature of Retouch where you can achieve realistic looks without leaving the program. It first tries to fix your photo and then uses the retouching tools to give you what you would get from an editor. All the tools are available for you to use, but he or she can be reluctant to use them. Adobe Photoshop CC 2014 will be the last version of the program to use the legacy engine. It is also the first version not to support CS3 through CS6. The downgrade was completed with the use of the CC (Creative Cloud). The next version of ImageReady CC will support all of the programs in the stable range. Specifically, Lightroom 5, Photoshop CS6 and Photoshop CS6 (CC version) and older.
