The latest features in Photoshop include Creative Cloud capabilities. Not only can you make adjustments, crop, and make basic edits to photos any way you want to, but you can do so using a cloud-based workflow. Bring your photo into Photoshop, then it one-triggers a series of online and local actions. Those actions adaptively adjust the photo to match up with your new settings. Then all that effort is compiled into a simple email to let you know how the new changes are affecting your photo. It sounds pretty easy, and it is. Adobe has introduced a new feature in Photoshop: Content-Aware Fill. With this new feature, an as-you-edit tool activates based on the area that you make changes to and uses the information you provide to intelligently reinforce the photo. It helps fill in images where there's a lot of detail, like the sky in a photo or a face in a portrait. The results are impressive, as we illustrated in the video below: The latest addition to Creative Cloud is the ability to share your creative work on the web and social media. When finished, share your work with others through websites, blog posts, and social networks in one click. A privacy attribute lets you set whether or how much you want to show off your personal style. Adobe just continued the roll of adding more video editing features to the Photoshop application. Along with this new feature, Adobe upped the max file size for the file format known as CS6/Elements/AI. The new max size is *720 megabyte*, up from *619 megabyte*. Other new features in Photoshop include options to remove shadows and using masks. It also adds the ability to remove filters and apply enhancements in the Tool Palette.

In the year 1988, Adobe Flash was presented. Through this tool, you can create your own video or animation in less than a minute. It was an extremely fast technique in the 90s and was used by creating web pages, advertisements, and all other types of innovative visual communication. For a few years, Flash was considered as the best animation tool available, until the invention of the most effective website engine, the Ajax from Microsoft, a few years later. In May, Photoshop touched a new milestone by releasing version 37. What's new in Photoshop is a major update for those looking to create products for the web. It comes with a range of new features and improvements, including a redesigned Interface, high-quality preset designs and a new tool called Artboards. See below for the full set of new Photoshop updates. If you are looking to create one-of-a-kind websites for yourself and others, you'll be pleased to know that the enigmatic formula - a well-thought-out collection of objects on your pages - is now in a Creative Style Panel. As you'd expect, you create them using the sliders which pop up after you set the intent. Made popular by the likes of Sam Tarantino and Behance, similar to Behance's Projects tab, you can now keep an eye on the dozens of creative projects you've worked on across Photoshop, Illustrator, Lightroom, InDesign and the rest of the Adobe creative stack. This new tab opens to reveal recently updated projects, which you can use to keep yourself motivated to keep them updated.
